Q3 2026 Operations Review

Published 15 September 2026. Prepared for the Operations Board.

This review covers the third quarter of 2026 across our four operating regions. It reports on-time delivery against the service level target, the open support backlog at each month end, and the support staffing behind that backlog. Definitions and restatements are set out in the notes at the end of the document, and should be read together with the tables.

Contents: page 2, on-time delivery performance. Page 3, support backlog and staffing. Page 4, notes, definitions and restatements.

Summary. Delivery performance held above target in North America and Europe. The support backlog continued to grow in Europe for a third consecutive month. Two regions require remediation plans; see the notes on page 4 before drawing conclusions from the table on page 2.

1. On-time delivery performance

The service level target for on-time delivery is 95.0% in every region. Figures below are for the quarter as a whole, as reported at the cut-off.

Region	On-time, Q3 2026
North America	96.4%
Europe	97.1%
Asia Pacific	94.1%
Latin America	95.2%
Target	95.0%

One region is shown below target in this table. See note 3 on page 4: one further region is restated below target once late-reported data is included.

2. Support backlog and staffing

Open support tickets at the end of each month. Backlog is measured at 23:59 UTC on the last calendar day of the month; see note 2.

Region	July	August	September
North America	812	903	774
Europe	1105	1198	1284
Asia Pacific	640	587	651
Latin America	402	455	498

2.1 Support engineers in post

Headcount at the end of September 2026.

Region	Support engineers
North America	9
Europe	12
Asia Pacific	7
Latin America	5

3. Notes, definitions and restatements

Note 1. On-time means a consignment delivered within the window promised to the customer at the point of booking. Redeliveries requested by the customer are excluded.

Note 2. Backlog is the count of support tickets in an open state at 23:59 UTC on the last calendar day of the month. Tickets awaiting customer response are counted as open.

Note 3. Restatement. The Latin America on-time figure on page 2 excludes the Valparaiso depot, whose data arrived after the reporting cut-off. Including Valparaiso, Latin America on-time performance for Q3 2026 was 93.8%.

Note 4. Where a region finishes the quarter below the 95.0% on-time target, the regional director must deliver a remediation plan to the Operations Board within 60 days of the publication date shown on page 1.

Note 5. Asia Pacific figures include the Singapore hub from July 2026 onward. Prior quarters are not directly comparable.
